

These figures were prepared by Erin Foresman (EPA) and Derek Hiltz (FWS) and show 2014 compliance with TUC Order and the Delta Outflow Standard in the WQCP (same as non-modified D-1641). Compliance with the 11,400 NDOI (or "Chippis Days") is an estimate because operators can choose which specific days (not the number of days) they will meet the Chippis Island days. Derek made an educated guess about the days that were likely chosen. Similarly, in the salinity compliance charts, he chose the days he thought would have most likely been used if the salinity compliance method were chosen as the 'way to win' or comply with the standard if a TUC Order on D-1641 had not been approved.

Compliance with Unrelaxed D1641 Spring Delta Outflow Standard 2014
Salinity Method of Compliance
